baka-pwapi-8

PUT API Request | API Chaining

put needed a token so created token test data-

First create json for token generator api-

```
1 {
2 "username":"admin",
3 "password":"password123"
4 }

codesnap.dev
```

put request body-Same body as used in post. Create one separate file.

post, get, token and put-

```
• • •
 2 const { test, expect } = require("@playwright/test");
 3 import { faker } from "@faker-js/faker";
 4 const { DateTime } = require("luxon");
 5 var dynamicPostRequest = require("../test-data/dynamicrequestbody.json");
 6 import { stringFormat } from "../utils/commons";
   const tokenRequestBody=require("../test-data/puttokenrequestbody.json");
 8 const putRequestBody=require("../test-data/putrequestbody.json")
12 test("create put api request", async ({
     request,
      // const dynamicRequestBody=stringFormat(JSON.stringify(dynamicPostRequest),
     var updatedRequestBody = stringFormat(
       JSON.stringify(dynamicPostRequest),
        "apple"
```

Continue from line 28 -

Continue from line 20 -

Continue from line 22 -

```
• • •
      const tokenResponse= await request.post("/auth",{
          data:tokenRequestBody
        })
       const tokenAPIResponseBody= await tokenResponse.json();
       const tokenNo=tokenAPIResponseBody.token;
       console.log("token number is " + tokenNo)
11 const putResponse=await request.put("/booking/"+bid, {
      headers:{
        "Content-Type":"application/json",
        "Cookie": `token=${tokenNo}`
      },
     data:putRequestBody
17 })
18 const putResponseBody= await putResponse.json();
     console.log(putResponseBody)
21 //validate status code
22 await expect(putResponse.status()).toBe(200);
23 });
```
